

Management Systems Advisor MSA™

IntegraSphere provides a remarkable **management vehicle** for creative business owner-developers whose ambitions are carrying them beyond their small business management style. These business owners can call upon **IntegraSphere** for the additional expertise they need to create, configure, and deploy their own management system adaptations built on the **Compact Enterprise OCS™** vehicle. Flexible adaptation is a primary value of the system, and it can be much simpler than dealing with multiple different software "tools" to make changes in your processes.

Compact Enterprise™ Configuration

Users find that the **Compact Enterprise OCS™ System** is delivered in a form that is easy to use. The system is initially configured for the unique characteristics of your business using screens available to your assigned User/Process (non-technical system) Administrator. Tasks like administering user names, I.D.s, authority, security, organization changes, management changes, and many system characteristics can all be handled through the standard administrator's interface screens.

Consulting services are available to help with your User/Process Administrator (non-technical) tasks where needed, and to provide training for new non-technical system administrators that you may assign.

Compact Enterprise™ Consulting

For clients with the **Compact Enterprise OCS™ System** who are implementing additional processes, reports, and controls, or who need services that are unique to their business, we offer additional consulting services including:

- Business Process Development
- Process Automation using **Compact Enterprise OCS™**
- Management Systems Design and Deployment
- Adaptations using configurations of **Compact Enterprise OCS™**
- Speaking on the **Compact Enterprise™** principles and implementations

These services are available on an hourly or daily basis performed remotely, or with per diem and travel charges included when necessary. Contact us for your own free discussion and advise today:
